

# Astronomy Example 2

## Downloading a "FITS" file

For examples, documentation, tutorials, etc, see Astropy at <http://www.astropy.org> (<http://www.astropy.org>)

```
In [1]: import scipy as sp

import matplotlib as mpl      # As of July 2017 Bucknell computers use v. 2.x
import matplotlib.pyplot as plt

# Following is an Ipython magic command that puts figures in the notebook.
# For figures in separate windows, comment out following line and uncomment
# the next line
# Must come before defaults are changed.
%matplotlib notebook
#%matplotlib

# As of Aug. 2017 reverting to 1.x defaults.
# In 2.x text.ustex requires dvipng, texlive-latex-extra, and texlive-fonts-recommended
# which don't seem to be universal
# See https://stackoverflow.com/questions/38906356/error-running-matplotlib-in-latex-t
mpl.style.use('classic')

# M.L. modifications of matplotlib defaults using syntax of v.2.0
# More info at http://matplotlib.org/2.0.0/users/deflt_style_changes.html
# Changes can also be put in matplotlibrc file, or effected using mpl.rcParams[]
plt.rc('figure', figsize = (6, 4.5))           # Reduces overall size of figures
plt.rc('axes', labelsize=16, titlesize=14)
plt.rc('figure', autolayout = True)              # Adjusts subplot parameters for new s

from PIL import Image
from astropy.io import fits
from astropy.utils.data import download_file
from astropy.visualization import astropy_mpl_style
plt.style.use(astropy_mpl_style)
```

```
In [2]: hh_file = download_file('https://astropy.stsci.edu/data/tutorials/FITS-images/HorseHead.fits')

Downloading https://astropy.stsci.edu/data/tutorials/FITS-images/HorseHead.fits (https://astropy.stsci.edu/data/tutorials/FITS-images/HorseHead.fits) [Done]
```

```
In [3]: hdu_list = fits.open(hh_file)
hdu_list.info()

Filename: /usr/tmp/tmpfhblp725z
No.    Name        Ver   Type      Cards   Dimensions   Format
 0    PRIMARY     1  PrimaryHDU     161   (891, 893)   int16
  1    er.mask     1  TableHDU      25    1600R x 4C   [F6.2, F6.2, F6.2, F6.2]
```

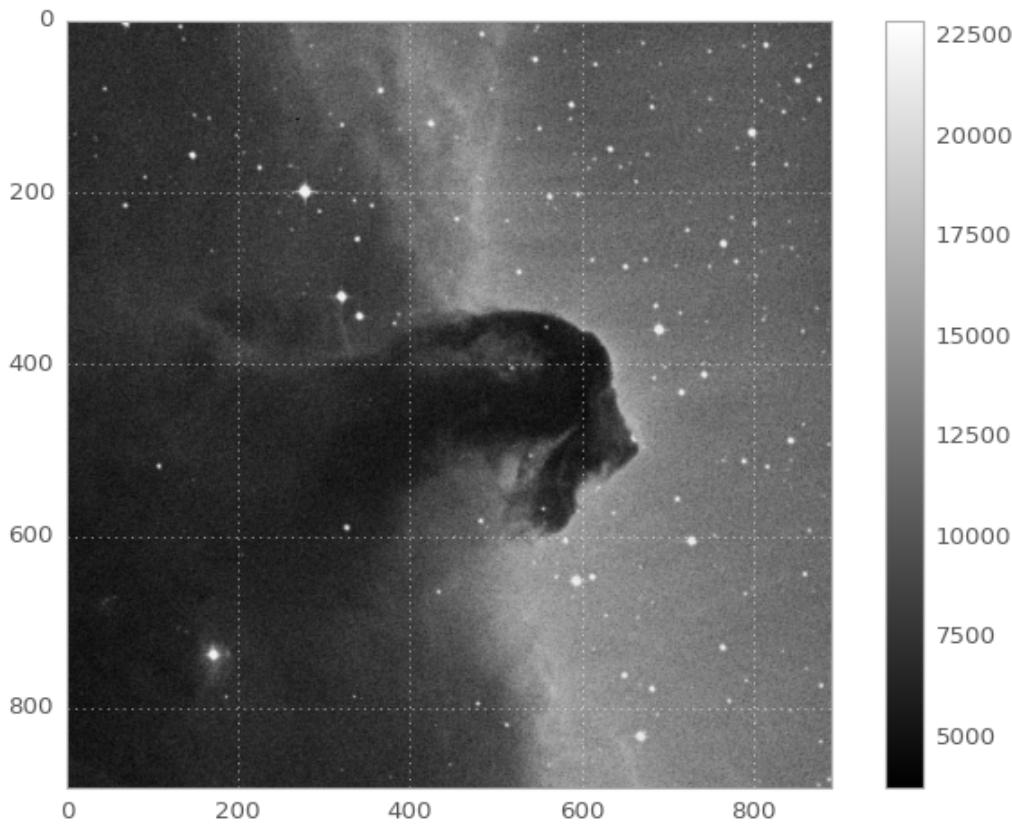

**Here's how to access the image data; it's a numpy/scipy array.**

```
In [4]: hh_data = hdu_list[0].data  
  
print(type(hh_data))  
  
print(hh_data.shape)  
  
<class 'numpy.ndarray'>  
(893, 891)
```

```
In [5]: hdu_list.close()
```

```
In [6]: plt.imshow(hh_data, cmap='gray')  
plt.grid(color='w')  
plt.colorbar();
```

Figure 1

## Version Information

version\_information is from J.R. Johansson ([jrjohansson@gmail.com](mailto:jrjohansson@gmail.com))

See Introduction to scientific computing with Python:

<http://nbviewer.jupyter.org/github/jrjohansson/scientific-python-lectures/blob/master/Lecture-0-Scientific-Computing-with-Python.ipynb> (<http://nbviewer.jupyter.org/github/jrjohansson/scientific-python-lectures/blob/master/Lecture-0-Scientific-Computing-with-Python.ipynb>)

for more information and instructions for package installation.

If version\_information has been installed system wide (as it has been on Bucknell linux computers with shared file systems), continue with next cell as written. If not, comment out top line in next cell and uncomment the second line.

```
In [7]: %load_ext version_information
```

```
#%install_ext http://raw.github.com/jrjohansson/version_information/master/version_info
```

Loading extensions from ~/.ipython/extensions is deprecated. We recommend managing extensions like any other Python packages, in site-packages.

```
In [8]: %version_information scipy, matplotlib, astropy, pillow
```

Software	Version
Python	3.6.1 64bit [GCC 4.4.7 20120313 (Red Hat 4.4.7-1)]
IPython	6.1.0
OS	Linux 3.10.0-327.36.3.el7.x86_64 x86_64 with redhat 7.2 Maipo
scipy	0.19.1
matplotlib	2.0.2
astropy	2.0
pillow	4.2.1
