CSCI 315 Operating Systems Design Activity 6

Please make sure to not work alone in this activity.	
1)	What happens to a child process when it's parent terminates before the child actually terminates? Does it continue to run or does it terminate, as well?
2)	What characterizes a <i>zombie process?</i> How is a zombie process created?
3)	How can one get rid of zombie processes? (Is there anything you haven't learned yet that will help you kill a zombie process?)
Soı	mething you may like to read:
<u>htt</u> p	o://www.howtogeek.com/119815/htg-explains-what-is-a-zombie-process-on-linux/
