

Practice with copy constructors

Here is a class for a House. Finish its copy constructor. Assume all other classes come with copy constructors (arrays do **not**). Assume the House class comes with get methods. You do not need to use set methods.

```
public class House {
    private Door[] doors;
    private String owner;
    private Sofa mySofa;
    private int[] phoneBook;
    private int myPhoneNum;
    private TV myTV;

    // copy constructor
    public House(                ) {

}
}
```
