Homework Assignment #2

(as email due: Thursday, January 27, 8:00 am)

1. Finish the in class work 2. & 3. As answer to this question email to me the name of your **program for 3c** and copy the program into your share.dir directory and make it readable as described in 3d. In case you finish this question early, please let me know, so that I can have a look at your programs as soon as possible.

2. Read about "decisions" in C++. As answer to this question keywords and/or examples are fine.

3. Keep working on the bibliography/model of your project. I do not need to see an answer to this question but you do have to steadily work on your project.

4. Comments: What of this assignment was most difficult and/or most interesting? Do you have any comments about last class and/or this course?
