

Installing Linux for Windows

The following is a Description of Jeremy Dreese:

To access the Xmanager Enterprise installer from a Windows computer:

1. Go to **Start** → **Run**
2. Enter the following text (including the quotes) in the dialog box that appears:
`"\\netspace\software\windows\campus\Engineering Applications\Xmanager Enterprise"`
3. Click the **OK** button
4. A new window should appear which contains a number of files, including "Installation Instructions.txt". This file explains how to install Xmanager Enterprise.
