

Assignments:

- March 30: (next class) Now that you have your main project program working, the next step for your project is to play with your program. I wish you fun with being creative, coming up with ideas about what to measure. If you like to discuss ideas, please feel free to ask. On March 30 is the 1st Version of your results due; this means figures and interpretation(s), where the interpretations can be handwritten and in keyword form. Figures are not required yet to be the final format, e.g. you may label axes by adding them via handwriting.
- March 30: Mini-Project II: This will happen fully in class, you will not get homework for mini-project II (because everybody is very busy with their main project).
- April 4: 2nd Version of Results due.
