CSCI 475 Senior Design - Fall 2014

Project Presentation Assignment

Your team will prepare and present a compelling presentation to communicate:

- The problem statement for your project.
- The goals, constraints, and criteria that you have identified in consultation with your client.
- The three viable solutions you identified for your problem.
- The result of the EDP analysis of your solutions, which led you to identify the best solution to implement.
- The preliminary design of the software system your team has developed for your chosen solution.

Think of it as a sort of “defense” of your engineering process and of your initial ideas for constructing a solution to your problem. The length of the presentation should be no more than 20 minutes. The team will field questions from the audience for another 5 to 10 minutes.

The presentation should use well constructed slides that are effective support tools for your oral communication. Your presentation will be evaluated according to compliance to the content specified in the five bullets above, the standard presentation rubric for this class, and the quality of the answers to questions that emerge from the audience.
