FRIDAY PROJECT

due: Friday January 19, 9 am

read: Course Information

Project:
In class you heard about examples for computer simulations in various disciplines. We spoke in specific about one model for traffic flow.

Find one example of a computer simulation. Ask instructors of your major and/or of other classes of yours and/or search on the web and/or in books or journals. Write a 1-2 page long paper: Describe the corresponding model, for what it is used and if available what the results are. Prepare also a very short (5-10 min) presentation of your paper for this Friday class.
