read:  
   • Course Information  
   • for C++ about input/output, data types and the commands if, for and while

due:  Tuesday, January 21, 8:30 am

Hand your answers back to me either via email (kvollmay@bucknell.edu) as textfile (not word document) or as hardcopy.

1. Finish the Unix Exercises and the Advanced Unix Exercises.
2. Explain (keywords are fine), the syntax of input/output and the commands if, for and while.
3. Find an example for computer simulations using a journal article, book, discussions with friends or anybody at Bucknell, the web or any other source. You will share your example in class.
4. Think about the topic of your individual project. You will share your thoughts in class.
5. Do you have any questions about the course and/or last class? What of this reading did you find most interesting and/or most difficult?
