

CSCI 315 Operating Systems Design
Fall 2016 - Prof. Felipe Perrone
Activity 2

Write the most complete and accurate C code you can manage to:

- 1) Have one parent process P create two children processes A and B. P should only terminate when both A and B have terminated.
- 2) Have one parent process P create one child process A that creates one child process of its own, called B. Process A should only terminate when B has terminated, and process P should only terminate when A has terminated.
