

# Radar Band Letter Designations (from IEEE Standard 521-2019)

The 300–1000 GHz range is designated as the *THz Band*.

The IEEE standard designates 110–300 GHz as the millimeter-wave band but acknowledges that in popular usage it is often defined as 30–300 GHz.

The spectrum above 300 GHz is not currently regulated by most governments.
