

Homework Assignment #9

(as email due: Thursday, February 21, 8:30 am)

1. Make a flow chart for steps 1. – 4. of the Nagel-Schreckenberg model as described in the paper which I handed out in last class [D. Chowdhury *et al.*, Curr. Sci. India **77**, 411 (1999)]. As answer to this question, please show me in class a hard-copy of your flow chart.
2. Keep working on the writing of your paper. I do not need an answer to this question, but it is essential that you keep working on your paper. The paper will be due Febr.26. Use as guidelines my description on Feb. 14 in class and you find also the discussed guidelines for the paper on our webpage. Although the syllabus calls this paper “First” Version, it should not be a first version, but a final version in your opinion, so already a result of many revisions. Please let me know in case of any questions.
3. **Comments:** What of this assignment was most difficult and/or most interesting? Do you have any comments about last class and/or this course?
