

Reading Assignment 09/24

(due: Wednesday, September 24, 9 am)

Read: §3.1 (Temperature !)

1.: For a plot of $S_A(q_A)$, if the slope is steep does this correspond to a high temperature or a low temperature?

2.: In Schroeder's "silly analogy" which group is at a higher temperature, the "normal" people or the "enlightened" people?

3. Comments: What of this reading did you find most difficult and what did you find most interesting? Any other comments?

No Homework due Wed, Sept. 22
